

QUICK-LOCK1 SYSTEM

ORTLIEB WATERPROOF

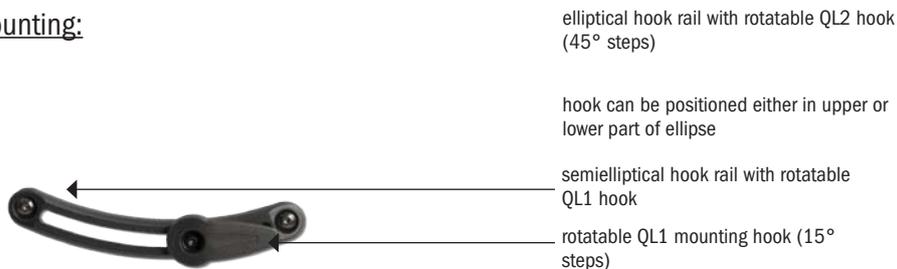

Mounting system for panniers, automatically closing

top mounting:

PVC
free

lower mounting:

- automatic closing and opening of hooks by lifting the pannier handle upwards
- simply mount pannier to the rack and let go of handle =>the QL-system closes automatically
- pannier can be unlocked and removed, also when a suitcase (e.g. Travel-Biker) is mounted on the rack
- large 16mm hook is also suited for Dutch city bikes
- QL-hooks are easily adjustable
- interchangeable inserts (8 and 11mm) for perfect fixture to all standart rack diameters
- large adjustment range of QL1 hook on hook rail
- all screws on hooks must be checked and tightened, if necessary, after 100 km for the first time, and then at 500 km intervals
- rails and hooks are available as spareparts

QUICK-LOCK2 SYSTEM

ORTLIEB WATERPROOF

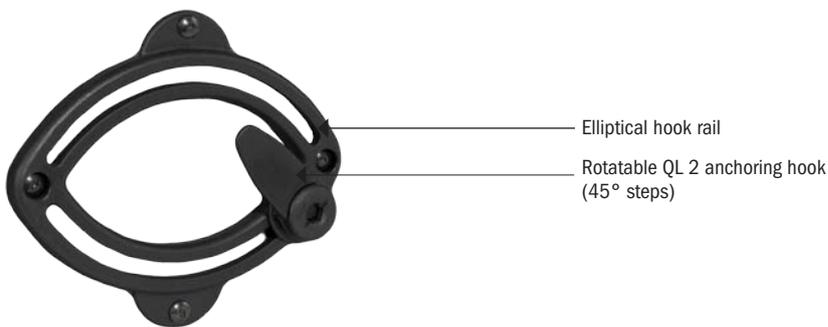

Mounting system for panniers

Upper mounting rail:

PVC
free

Lower mounting rail:

- Perfect fixture for all standard racks with a diameter of 8 to 16 mm
- Compatible mounting on low riders with welded stiffening plate
- Hooks close automatically
- Wide range of the QL 2 hooks on the rail
- Variable angle allows plenty of legroom (e.g. Office-Bag)
- Wide range (horizontally and vertically) of the lower hook which is rotatable in 45° steps on the elliptical rail
- Fast adjusting of the upper QL hooks without any tools
- Fast and stepless adjusting of the lower hook without any tools
- Quick change of hook inserts (8 and 11mm) without any tools
- Lower rail provides effective abrasion protection from the front quick release axles
- Strong torsion-resistant upper rail with three-point attachment to bag

ORTLIEB Pannier Mounting System QL2

Automatically closing mounting system for panniers

This mounting system for bike panniers offers the perfect solution which became necessary because the bicycle is becoming more and more important as means of transport in daily life and on journeys.

Bicycles and racks have developed, and last but not least the demands of bikers have increased in a way that previous systems needed to be updated with more comfortable new systems.

The QL2 version offers the following advantages:

- Perfect fit to all standard racks with a diameter from 8 to 16 mm and to low rider racks with welded stiffener plate
- Automatically closing hooks
- Extremely large adjustment range of QL2 hooks on the hook rail
- Very large room for pedalling thanks to the pivotable rail (e.g. Office-Bag)
- Very large adjustment range (horizontally and vertically) of the lower hook on the elliptical rail which is rotatable in 45 degree steps
- Quick adjustment of all hooks without requiring any tools
- Quick exchange of hook inserts (8 and 11 mm) without requiring any tools
- Effective abrasion protection by means of lower rail in the area of the front axle (quick release clamp on front wheel)
- Strong rigid upper hook rail with 3-point attachment
- Anti-theft device for QL2 system available as accessory
- All mounting components are easily exchangeable in case of defect

The following series models of ORTLIEB bike panniers are provided with the QL2 system: Bike-Tourer, Bike-Packer Plus, Back-Roller Plus, Sport-Packer Plus, Front-Roller Plus, Bike-Shopper, Velo-Shopper, Downtown QL2, Office-Bag (M and L) and the Motorcycle Side Bag.

ORTLIEB Quick-Lock2.1 (QL2.1)

New bike pannier mounting system

The new bike pannier mounting system QL2.1 is a further development of the proven QL2 system. Many important features are improved:

For higher stability, the upper hook rail is now one piece. ORTLIEB's new assembly system allows the use of extremely flat nuts on the inner side; the same applies to the lower hook rail.

The basic 16 mm hooks can now be reduced to 8, 10 and 12 mm; in addition, a 20 mm hook is available for larger tube diameters as now often used for E-bikes. Further modification: the hook reduction inserts are now attached from the sides and are secured by an optimized locking mechanism.

Additional improvement: the lower hook rail is now made of a two-component synthetic combination featuring softer surfaces. This reduces abrasions on the carrier. Just as in the proven QL2 system, all components are adjustable without requiring any tools, and are easily exchangeable. An anti-theft device is available as optional accessory and can be integrated into the rail.

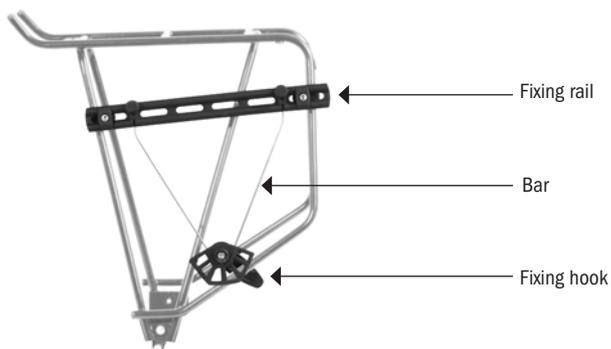

All bike pannier models of the Black'n White Line, the High Visibility Line and all Back-Roller Classic Design models feature the new QL2.1 mounting system for bike panniers.

QUICK-LOCK3 SYSTEM

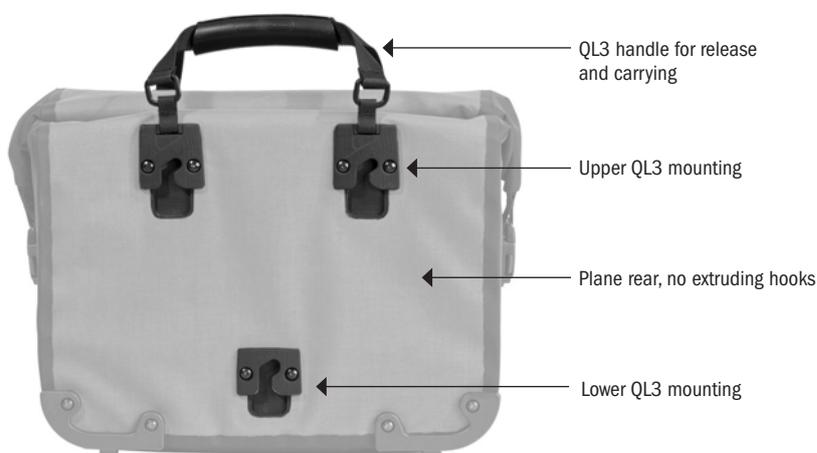

Mounting system for panniers, automatically closing

ORTLIEB WATERPROOF

free

Received EUROBIKE AWARD
2010 (organised by if Design and
Messe Friedrichshafen)

Weight g/oz.
112/4.0

Weight of QL3 mounting
system (elements on rack)

- Innovative mounting system for bike panniers especially for city and commuting panniers with single handed use
- Automatic opening of hooks by lifting the pannier handle
- Automatic closing of hooks by lifting the pannier handle
- Main components are fixed to the rack thus providing a clean reverse side comfortable to carry
- Adjustable height and angle for better legroom
- Lower hook rotatable in 360° steps (24 steps each 15°) for individual adaption to rack
- Top of rack remains free for baskets, boxes etc.
- Fits on all standard racks
- Mounting set available for use on further bikes
- Mounting rail compatible with ORTLIEB standard mounting systems

ORTLIEB Pannier Mounting System QL3

Automatically closing mounting system for panniers

A bike briefcase which is not immediately recognized as a bike briefcase - this dream of numerous commuters now came true. The patented QL3 mounting system is practically invisible on the bag, as the main mounting components remain permanently on the rack (either on the left or right side). The mounting components on the bag's rear side remain level so that there are no protruding components on the bag's back side.

The QL3 system received the Eurobike Award 2010. It consists of mounting components that can be fixed to any standard rack up to a tube diameter of 10 mm. Position and inclination of the bag can be adjusted individually.

The ORTLIEB QL3 system allows quick and easy single-handed mounting and removing of the bag. When fixed to the rack, the hooks open and close automatically by lifting the bag's handle.

The three-point fixing ensures safe mounting, also when going fast on tough roads or over curbstones.

The ORTLIEB bags Office-Bag QL3 and Downtown QL3 are supplied with one Quick-Lock3 mounting set. For a second bike, it is also available individually as accessory.
